bioreactors. These are particularly useful for detecting or treating cancers, inflammatory diseases, atherosclerosis, cardiac injury, inflammatory diseases, atherosclerosis, cardiac injury, inflammatory defects, premature aging, acquired immunodeficiency syndrome (AIDS) and diabetic complications in mammals, e.g. humans, dogs, cats, cattle, horses, sheep, pigs, goats or rabbits. The sequences are also useful in biotechnological and medical research and in various industrial applications. Sequences ABU60230-ABU60245 represent human PRO

The invertion discusses a merical to the comparing time during bone to cartilage formation. The method comprises determining levels of RNA from the genes to obtain levels of expression and comparing these to a set of reference levels for each of the genes. Bone formation is an est of reference levels for each of the genes. Bone formation is an estential process in embryonic development and plays a critical role in essential process and conditions in humans. Two genes found to be regulated during bone and cartilage formation are the cytchine receptor-like factor (during bone and cartilage formation are the cytchine receptor-like factor cell differentiation, and matrix metalloproteinase 23 (MMP23), which is specifically regulated during mesenchymal computer program for analysing levels of expression of a number of genes, compositions comprising a number of antagonists or agonists of the genes and methods for determining whether a subject has, or is likely to develop, a disease related to bone or cartilage formation or resorption, for identifying a compound for treating, modulating or stimulating a disease related to bone or cartilage formation possibly acting as a cadherin or CD8 agonist or a cytokine antagonist. The methods and compositions are useful for cartilage formation such as osteodystrophy, osteohypertrophy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              osteolytic lesions produced by bone metastasis, bone loss due to mimobilisation or sex hormone deficitiency, bone and cartilage loss caused by an inflammatory disease, rheumatoria arthritis, osteoarthritis and bone fractures. The sequence presented is the human CLP-1 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240

The invention relates to an isolated nucleic acid encoding a secreted/
transmembrane polypeptide (designated as PRO proteins). 15 PRO
Cransmembrane polypeptide (designated as PRO proteins). 15 PRO
Critical and their encoding polymucleotides are disclosed. Also
included are a vector comprising the PRO nucleic acid, a host cell
comprising the vector, a process for producing a PRO polypeptide (by
conjugation and recovering the PRO polypeptide from the expression of the PRO
polypeptide, and recovering the PRO polypeptide from the cell culture, an
cisolated polypeptides a chimaeric molecule comprising PRO fused to a
heterologus annio acid sequence and an antibody which specifically binds
to PRO. The PRO nucleotide sequences are useful as hybridisation probes,
in chromosome and gene mapping, in generating sense and antisense RNA or
CC PNA, in generating transgenic or knock-out animals which can be used in
ct he development and screening of therapeutically useful reagents, and in
cc ene therapy. The polypeptides may be used as molecular weight markers
cc for protein electrophoreais purposes. The PRO polypeptides and nucleic
acids may also be used for chromosome identification, and tissue typing.
CC acids may also be used for chromosome identification, and tissue typing.
CR syndrome. Other PRO proteins are variously implicated in immune
cc syndrome. Other PRO proteins are variously implicated in immune
cc injury, infertility, birth defects, premature aging, cardiac injury,
c injury, infertility, birth defects, premature aging, cardiac injury,
considered and diabetic complications. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DNTCEEYHTVGPHSCHIPKDLALFTPYEIWVEATNRLGSARSDVLTLDILDVVTTDPPPD 240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                    New transmembrane polypeptides and polymucleotides useful for chromosome identification, tissue typing, gene therapy, in chromosome and gene mapping, or as molecular weight markers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    VHVSRVGGLEDQLSVRWVSPPALKDFLFQAKYQIRYRVEDSVDWKVVDDVSNQTSCRLAG

                                                                                                                                                                                                                              New isolated PRO polypeptide and encoding nucleic acids, useful for the diagnosis and treatment of disorders such as inflammatory disease, atherosclerosis, cardiac injury, infertility, AIDS, cancer and diabetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a novel isolated PRO polypeptide. The methods a compositions of the present invention are useful for the diagnosis and treatment of disorders such as inflammatory disease, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, cancer, diabetic complications and mutations in general. This is the amino acid sequence of a novel human secreted PRO protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MPAGERGPAAQSARPPPILPLILLLCVLGAPRAGSGAHTAVISPQDPTLLIGSSLLATC

The nucleotide sequences of the invention may have antiinflammatory, antiarteriosclerotic, cardiant, anti-infertility, anti-HTV, cytostatic and antidiabetic activities and may be used in gene therapy. The nucleic acids and polypeptides are useful for treating inflammatory diseases, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, cancer, or diabetic complications. The nucleic acids are useful as hybridisation probes, in chromosome and gene mapping, and in generating antisense RNA or DNA. The polypeptides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. Both are useful in tissue typing. The present sequence represents a protein encoded by the nucleic acids of the

The invention relates to an isolated PRO polypeptide having at least 80% amino acid sequence identity to and scoring at least 80% positives when compared to any of 15 fully defined sequences of 235-954 amino acids, given in the specification. Also included are: (1) an isolated PRO conscience to a specification of the sequence identity to a nucleotide sequence that encodes PRO or its extracellular domain, and comprising any of 15 fully defined nucleotide sequences of 957-3441 bp, given in the specification and deposited under ATCC accession number 209526, 209526, 209528, 209528, 209528, 209528, 209528, 209528, 209528, 209529, 209527, 209570, 209618, 209619; (2) a vector comprising the PRO nucleic acid; (3) a host cell comprising the vector; (4) producing PRO polypeptides, comprising culturing the cell for expression of the PRO polypeptide and recovering the PRO polypeptide from the cell culture; (5) a chimaeric molecule comprising PRO polypeptide and recovering the PRO polypeptide and recovering the PRO polypeptide and recovering the pRO polypeptide and compositions are useful for the diagnosis and treatment of methods and compositions are useful for the diagnosis and treatment of disorders such as inflammatory disease, organ failure, atheroscalerosis, cardiac injury, infertility, birth defects, premature aging, AIDS (acquired immunodeficiency syndrome), cancer, diabetic complications and mutations in general. The present sequence is a a PRO polypeptide 1; 179 239 SVHGDPPGATAEGLYWTLNGRRLPPELSRVLNASTLALALANINGSRQRSGDNLVCHARD 119 SVHGDPPGATAEGLYWTLNGRRLPPELSRVLNASTLALALANLNGSRQRSGDNLVCHARD 120 121 GSILAGSCLYVGLPPEKPVNISCWSKNMKDLTCRWTPGAHGETFLHTNYSLKYKLRWYGQ 180 DNTCEEYHTVGPHSCHIPKDLALPTPYEIWVRATNRLGSARSDVLTLDILDVVTTDPPPD 240 23 9 1 MPAGRRGPAQSARRPPPLLP-LLLLCVLGAPRAGSGAHTAVISPQDPTLLIGSSLLATC GSILAGSCLYVGLPPEKPVNISCWSKNMKDLTCRWTPGAHGETFLHTNYSLKYKLRWYGQ DNTCEEYHTVGPHSCHIPKDLALPTPYRIWVEATNRLGSARSDVLTLDILDVVTTDPPPD 1; Gaps DB 6; Length 422; Query Match 99.5%; Score 2279.5; DB 6; Length Best Local Similarity 99.8%; Pred. ```

J. Hum. Genet. 72:375-383(2003).

-!- FUNCTION: Cytokine receptor subunit, possibly playing a regulatory role in the immune system and during fetal development. May be involved in nervous system development.

-!- SUBUNIT: Forms covalently linked di- and tetramers. Forms a heteromeric complex with cardiotrophin-like cytokine (CLC); the CRLF1/CLC complex is a ligand for the ciliary neurotrophic factor receptor (CMTER).
SUBCELLULAR LOCATION: Secreted.
IISSUE SPECIFICITY: Highest levels of expression observed in spleen, thymus, lymph node, appendix, bone marrow, stomach, placenta, heart, thyroid and ovary. Strongly expressed also in

fetal lung.

INDUCTION: Up-regulated in fibroblast primary cell cultures under stimulation by IFV-gamma, TFV-alpha and IL-6.

SUMMIN: The WSXWS motif appears to be necessary for proper protein folding and thereby efficient intracellular transport and cell-surface receptor binding.

SUMMIN: Defects in CRLF1 are the cause of cold-induced sweating syndrome (CISS) [MIM:272430]. CISS is an autosomal recessive disorder characterized by profuse sweating induced by cool surroundings (temperatures of 7 to 18 degrees Celsius). Additional abnormalities include a high-arched palate, nasal voice, depressed nasal bridge, inability to fully extend the elbows and kyphoscoliosis.

SIMILARITY: Belongs to the type I cytokine receptor family. Type 3 -

subfamily.
SIMILARITY: Contains 2 fibronectin type-III domains 1

SUBUNIT: Forms covalently linked di- and tetramers. Forms a heteromeric complex with cardiotrophin-like cytokine (CLC); the CREPI/CLC complex is a ligand for the ciliary neurotrophic factor receptor (CMTRR) (By similarity).

SUBCELLULAR LOCATION: Secreted (By similarity).

TISSUE SPECIFICITY: Widely expressed in the embryo. Not detected in the brain of adult mice.

Genoscope; Whitehead Institute Centre for Genome Research;
Submitted (FRB-2004) to the EMBL/GenBank/DDBJ databases.
-!- CAUTION: The sequence shown here is derived from an
EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is
prellminary data.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13-SEP-2005 (TrEMBLrel. 31, Created)

Geissen M., Heller S., Pennica D., Ernsberger U., Rohrer H.;
"The specification of sympathetic neurotransmitter phenotype depends on gp130 cytokine receptor signaling.";
Development 125:4791-4801(1998).
-!- DOMAIN: The WSXWS motif appears to be necessary for proper protein folding and thereby efficient intracellular transport and cell-surface receptor binding (By similarity).
-!- DOMAIN: The box I motif is required for JAK interaction and/or activation (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        260 QDWEMVPEEDTASHRDSFTLQDLLPNTVYEVSIRC----IHKDGHGFWSDWSELKKQVT 314
                                                                                                                                                                                                                                                                                                                                          Chen J., Grace A., Chien K.R.;
Submitted (JAN-1998) to the EMBL/GenBank/DDBJ databases.
-!- DOWAIN: The WSXWS motif appears to be necessary for proper protein folding and thereby efficient intracellular transport and cellsurface receptor binding (By similarity).
-!- DOWAIN: The box 1 motif is required for JAK interaction and/or activation (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      OLUN-2002 (TrEMBLrel. 21, Created)

-! DOMAIN: The WAXWS motif appears to be necessary for proper protein folding and thereby efficient intracellular transport and cellsurface receptor binding (By similarity).
-!- DOMAIN: The box 1 motif is required for JAK interaction and/or activation (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                prolactin receptor.";
J. Biol. Chem. 274-35468 (1999).
-1- DOWAIN: The WSXWS motif appears to be necessary for proper prote folding and thereby efficient intracellular transport and cellsurface receptor binding (By similarity).
-1- DOWAIN: The box 1 motif is required for JAK interaction and/or activation (By similarity).

rush search 09/037, 657

Hi Mr.Woodward,

Would you kindly approve this rush search? It is a very old case in my docket. The claims are allowable. However, Applicant is running out of time by Thursday the 13th of April. An interference search must be done before then. thanks.

Kindly search SEQ ID NOs: 13, 15 and 44 of 09/037,657 against commercial and interference data bases. Thank you very much.
